PREFACE.

In this short Grammar of the Latin Accidence I have endeavoured to arrange the paradigms in such a way as to give some hint of the connection between the different forms, without departing from the traditional number and order of Declensions and Conjugations. In the arrangement by stems I have closely followed Mr. Roby, even in the somewhat uncertain distinction between consonant and i-stems in the Third Declension of Nouns, feeling that some division is necessary, and that his is more satisfactory than any other.

The Notes, which are printed in small type at the bottom of the page, may well be omitted until the large print has been thoroughly learnt. I have confined the Latin Declension of Greek words to an Appendix, for the sake of clearness, and treated the Reckoning of Time, Money, and the Numerals, at the end of the book, rather for the sake of following the usage of Latin Grammars than because they belong strictly to the subject.

I have omitted the Syntax because, while a knowledge of grammatical forms is necessary to the beginner of Latin, the use of these forms can only be taught by progressive exercises, and many excellent books on this subject already exist.

CONTENTS.

FIRST LATIN GRAMMAR.

THE LETTERS.

§ 1. Letters of the Latin Alphabet are these:—

Modern Signs.		Name.	
A	a	a	
B	b	be	
C	c	ce	probably always pronounced hard.
D	d	de	
E	e	e	
F	f	ef	
G	g	ge	
H	h	h	
I	i	i	generally written **J, j,** (1) before a vowel at the beginning of words; (2) between two vowels.
J	j		
K	k	k	used only in a few abbreviations, as K for *Călendae.*
L	l	el	
M	m	em	
N	n	en	
O	o	o	
P	p	pe	
Q	q	qu	always followed by u.
R	r	er	
S	s	es	
T	t	te	
U	u	u	written **V, v,** (1) before a vowel at the beginning of words; (2) between two vowels.
V	v		
X	x	ix	
Y	y	Upsīlon	only used to write Υ *and* Ζ in words borrowed from the Greek (as chlămys, zōna).
Z	z	Zēta	

§ 2. **Vowels**. Each of the letters **a, e, i, o, u, y** (called upsĭlon) can be pronounced by itself, and is named from its own sound without any addition. They are called vowels or self-sounding letters.

When two vowels are pronounced rapidly together so as to produce one vowel-sound, this combination is called a diphthong or double-sound. These are

> **ae, oe, au,**
> **eu, ei, ui,** seldom found.

§ 3. **Consonants**. The other letters, which can only be sounded in connexion with vowels, are called consonants or letters sounded *with*. In naming these letters, as we see from the above table, a vowel is pronounced either before or after the sound of the consonant.

§ 4. Consonants may be divided—

I. According to the parts of the mouth at which they are formed.

II. According to the character of the sound.

<div align="center">I.</div>

Gutturals or sounds formed at or near the throat (or soft palate), } **c, k, g, q**.

Linguals or sounds formed with the tongue, **r, l**.

Dentals or sounds formed at or near the teeth, **t, d, n, s, z**.

Labials or sounds formed at or with the lips, **p, b, f, v, m**.

II.

Sharp sounds or Těnues,	c, k, g, t, p.
Soft sounds or Mědĭae,	g, d, b.
Liquids,	l, r, m, n.
Sibilant (or hissing letter),	s.
Aspirate (or rough breathing),	h.

The letters **x** = **ks** and **z** = **ds** are called double letters.

§ 5. **Semivowels.** The letters **j** and **v**, which in Latin represent the sounds of the English y and w, are called semivowels.

§ 6. *Table of the alphabet arranged according to pronunciation.*

Vowels.	Semi-vowels.	Consonants.				Aspirate.
		Guttural.	Lingual.	Dental.	Labial.	
a					b	
		c		d		
e					f	
		g				h
i	j	k	l		m	
				n		
o					p	
		q	r	s, t		
u	v					
		x = ks				
y				z = ds		

INFLEXION.

§ 7. Words are inflected, that is, altered in their form, to mark their relation to other words in a sentence.

Stem. That part of a word which remains unchanged in inflexion is called the stem.

Suffix. That part of a word which may be changed is called the suffix or ending.

Nouns, pronouns, and verbs are inflected; other words are not.

NOUNS.

§ 8. Nouns are inflected by adding to or changing the *end* of the stem. The inflexion of nouns is called declension.

The Latins used inflexions to distinguish—

(1) Two Numbers: the Singular when a word signifies one thing, the Plural when it signifies more than one.

(2) Six Cases: Nominative, Vocative, Accusative, Genitive, Dative, Ablative.

(3) Three Genders: Masculine, Feminine, Neuter.

Note 1.   A distinct form for the Vocative case is only found in the singular of masculine nouns of the second declension, and in some words adopted from the Greek.

A case called the Locative, found in some words, is always the same in form either as the genitive, the dative, or the ablative.

Note 2.   Names of things which were thought of as having sex were Masculine or Feminine; others were Neuter (*neither of the two*).

§ 9. Nouns are either Substantive or Adjective.

Substantives have inflexions of number and case, but are chiefly each of one gender only.

Adjectives have inflexions of number, case, and gender.

§ 10. Certain case-endings are common to all nouns.

Singular.

Masc. and Fem.		Neut.
Nom.		} alike.
Acc.	-m	

Plural.

	Masc. and Fem.		Neut.

§ 11. DECLENSION OF NOUNS SUBSTANTIVE.

Substantives are arranged in five classes, called declensions, according to the endings of the genitive singular.

In the 1st declension the genitive singular ends in **-ae**

„	2nd	„	„	**-i**

DEGREES OF NOUNS ADJECTIVE.

§ 27. The Adjective is a noun expressing quality.

In Latin many adjectives have three forms, denoting different degrees of quality.

The positive is the simple form of the adjective, as **durus**, *hard*.

The comparative denotes :—

> (1) A higher degree, when two persons or things are compared, as **durior**, *harder*.

> (2) A too high degree, as **durior**, *too hard*.

The superlative denotes :—

> (1) A higher degree, when more than two persons or things are compared, as **durissimus**, *hardest*.

> (2) A very high degree, as **durissimus**, *very hard*.

§ 28. From the positive we may find the comparative by adding **-ior** to the last consonant of the stem ; the superlative either by adding **-issimus** to the last consonant of the stem ; or, by doubling the last consonant and adding **-imus** *.

---

ADVERBS.

§ 74. Adverbs are indeclinable words, formed from nouns and pronouns (of which they were originally cases).

§ 75. I. ADVERBS FORMED FROM NOUNS.

Those ending in—

e and o are formed from adjectives with -o stems, as
> dignē, *worthily ;* benē, *well.*
> certō, *certainly ;* cĭtŏ, *quickly.*

tĕr, chiefly from adjectives and participles with -i stems, as
> fēlīcĭtĕr, *happily ;* ămantĕr, *lovingly.*

im, chiefly from past participles, as
> sensim, *gradually ;* minutim, *in small pieces.*

tŭs, chiefly from substantives, as
> fundĭ-tŭs, *from the bottom ;* dīvīnĭ-tus, *from the gods.*

§ 76. The neuter of adjectives is sometimes used adverbially, as
> multum, *much ;* făcĭlĕ, *easily.*

§ 77. Degrees of adverbs.

The comparative is formed like the neuter of the comparative adjective.

The superlative is formed like the neuter of the superlative adjective.

Note also,
> saepĕ, *often ;* saepĭŭs ; saepissĭmē.
> diū, *for long ;* dĭūtĭŭs ; dĭūtissĭmē.
> nūpĕr, *lately ;* nūperrĭmē.

§ 78. II. Adverbs formed from Pronouns.

Adverbs of place. The following are pronominal adverbs of place, ending in—

ō,	quō,	ĕō,	ălĭō,	hūc,	istūc,	illūc,
	whither,	*thither,*	*to another place,*	*hither,*	*to your place,*	*to that place.*
dĕ,	undĕ,	indĕ,	ălĭundĕ,	hinc,	istinc,	illinc,
	whence,	*thence,*	*from another place,*	*hence,*	*from your place,*	*from that place.*
bĭi or ŭbĭ,	ĭbĭ,	ălĭbĭ,		hīc,	istīc,	illīc,
where,	*there,*	*elsewhere,*		*here,*	*there (where you are),*	*there (where he is).*
ā,	quā,	ĕā,	ălĭā,	hāc,	istāc,	illāc,
by which way,	*by that way,*	*by another way,*		*by this way,*	*by your way,*	*by that way (near him).*

Adverbs of **cause, manner**, etc.

> ŭt, *as*
> quī, *how*
> quam, *as*
> quŏd, ⎫
> quĭă, ⎭ *because*
> cūr, *why*
> si, *if.*

> sīc, ⎫
> ĭtă, ⎭ *so, thus*
> tam, *so*
> ĕō, *therefore.*

Adverbs of **time**,

> quum, *when*
> quŏtĭens, *how often*

> tunc, *then*   nunc, *now.*
> tŏtĭens, *so often.*

§ 79. Of the adverbs given above those in the first line are called **connective** adverbs, because they connect the sentence to which they belong with another, as well as qualify a word in their own sentence. They are all formed from the relative pronouns (unde=quonde; ubi=cubi or cui; ut=quod; cur=quā re). They are often called subordinating conjunctions.

The other adverbs, which are formed from demonstrative pronouns, do not connect sentences.

CONJUNCTIONS.

§ 80. Conjunctions are indeclinable words, connecting names, sentences, or parts of sentences.

They are often called co-ordinating conjunctions.

Of these, ĕt, -quĕ, atquĕ, āc, meaning *and,* are called copulative, because they *connect* the meaning of words or sentences; sĕd, vērum, autem, ăt, meaning *but,* are called adversative, because they *contrast* the meaning; aut, vel, vĕ, meaning *or,* are called disjunctive, because they *disconnect* the meaning.

PREPOSITIONS.

§ 81. The following words are used as prepositions with the accusative case:

antĕ	ăpŭd	ăd	adversŭs
before	*at*	*to*	*towards*
circā	circum	cĭtrā, cĭs	
about	*around*	*this side of*

§ 83. The following are used as prepositions with the *ablative :*

ā, ăb	cōram	cum	and	dē

§ 84. the following (which are really cases of substantives) are used as prepositions with the genitive :

causā, grātiā	ergo	instăr	tĕnŭs
for the sake of	*on account of*	*like to*	*reaching to.*

Note 44.　Of these words ergo, tĕnŭs, versŭs are always placed after their substantives; cum after personal, and often after relative pronouns, as mēcum, quīcum.

Note 45.　Many of these words are also used as adverbs; the following only as prepositions, that is to say with a substantive dependent on them : —the monosyllables, also ăpŭd, ergo, intĕr, pĕnĕs, sĭnĕ, tĕnŭs.

APPENDICES.

APPENDIX I.

LATIN DECLENSION OF GREEK NOUNS.

Of the words adopted from the Greek, some (like poetā) were declined throughout like Latin nouns, others retained many Greek forms. They are found belonging to the first, second, and third declensions of Latin nouns.

FIRST DECLENSION.

Stems in -a.

Examples: poeta, m. poet, (ποιητη-); Electra, f. (Ἠλεκτρα-); Hecate, f. (Ἑκατη-); Aenea-, m. Aeneas, (Αἰνεια-); Anchise-, m. Anchises, (Ἀγχιση-).

Dat.	poetae		Hecatē	
Abl.	poetā.		Hecatē	Hecatā.

Plural, like the first declension of Latin nouns.

Obs. 1. In words like Hecate we also find all the inflexions of the First (Latin) declension. Vergil and Horace prefer the Latin forms; the Greek were used by and after Ovid. (fl. A.D. 9).

Obs. 8. These are to be distinguished from dental stems in -ont
(Gk. -οντ), which are declined like elephas (p. 104). Some however,
especially those in -φοντ, lose the -t in Latin, e.g. Antipho, Antiphōnis
('Αντιφῶν, 'Αντιφῶντος).

APPENDIX III.

THE ROMAN METHOD OF RECKONING TIME.

The Year.

The Romans in referring to a past year frequently distinguished it by the name of the consuls who held office at the time, and as being so many years before the beginning of some great war.

As we date a year from that commonly assigned to the birth of Christ, the Romans reckoned from the founding of Rome, which was supposed to have taken place in the year called by us B.C. 753. Therefore the year B.C. 751 would be known by them as annus urbis conditae tertius or A.U.C. III. It must be remembered that the Romans included the year, month, day, etc., from which they counted, so that what we should call 2 years after 753, they counted as 3.

In order therefore to find the year B.C. of any Roman date A.U.C., subtract the number given from 754, adding 1 for the inclusive reckoning. The same method will give the year A.U.C. of any date B.C.; e.g.

$$\text{A.U.C. } 710 = \text{B.C. } (754-710) = \text{B.C. } 44.$$
$$\text{B.C. } 44 = \text{A.U.C. } (754-44) = \text{A.U.C. } 710.$$

The lustrum was a period either of four or five years.

The Months.

The Roman year originally contained ten, afterwards twelve months, beginning with March. These were called **mensis Martius** (*the month of Mars*, the god of war), **Aprīlis** (*of sprouting*, rt. aperi-, *to open*), **Maius** (*of growing*, rt. mag.), **Junius** (*of thriving*, rt. juv.), **Quintīlis, Sextīlis, September, Octōber, Nŏvember, Dĕcember** (*the fifth, sixth, seventh, eighth, ninth,* and *tenth* months of the year), **Jānuārĭus** (*of opening* farm labours, rt. jan.), **Februārĭus** (*of cleansing*, rt. ferv.). After B.C. 153 the year was considered to begin with January. The name Quintilis was changed to **Julius** in

B.C. 44 in honour of Caius Julius Caesar, whose birthday fell
in that month; Sextilis became **Augustus** in B.C. 8, to cele-
brate the triumphs, etc., of the first emperor.

Before the reformation of the calendar by Julius Caesar
(B.C. 46) the months March, May, July (then called Quintilis),
and October contained 31 days, February 28, and the rest 29.
To this year of 355 days an intercalary month (**mensis
intercălāris**, but called by Greek writers Mercedonius, *the
labour month*) of 22 or 23 days was added every other year,
probably after the 23rd of February.

The calendar as reformed by Julius Caesar contained
months of the same length as ours. Every fourth year the
24th of February was reckoned twice, which was equivalent
to our 29th of February in leap-year.

The month both before and after B.C. 46 was divided into
weeks, the first beginning on the first day or **Călendae**
(*proclamation day*), on which the length of the first week was
in early days proclaimed to the people. The second week,
of 8, or, according to Roman reckoning, 9 days, began on
the **Nōnae**, which fell on the 5th of eight months in the
year, on the 7th of March, May, July, October, because
they originally contained 31 days. The third week began
on the **Idūs** (so called perhaps from (*div-*)*ido*, the division
of the month, or from rt. id, *to shine*, the day of the full-
moon) which fell on the 13th or 15th according as the
Nones fell on the 5th or 7th.

The intervening days were reckoned backwards from these,
the days between the Calends and the Nones as so many
before the Nones, those between the Nones and the Ides as
so many before the Ides, those following the Ides as so
many before the Calends of the next month.

The day immediately preceding each of these three was
called **pridie** (**Nonas, Idus, Calendas**), that next before **ante
diem tertium** (**Nonas, Idus, Calendas**), or a. d. III Non.
Id. Kal., and so on. This expression was considered as one
word and might have a preposition before it, e.g. **differre
aliquid in ante diem XV Calendas Novembres**, *to put off*

---

*Obs.*12. The first day of the fourth week was perhaps called **nundĭnae**,
nine days, and began 9 days before the end of the month.

something to the 18*th of October.* As for the construction, ante seems to govern Calendas Novembres, the ordinal numbers being attracted from the ablative (e. g. quindecimo die) and inserted between the preposition and its noun.

The days of intercalary months were denoted in the same way, the first day being called **calendae intercălāres**, from which the days between the Ides and the 23rd of February were reckoned backwards.

After Caesar's reform, every fourth year the 24th of February, or a. d. **VI Kal. Mart. priorem**, was followed by a. d. **VI Kal. Mart. posteriorem**. Hence arose the name **annus bissextus** (or in later Latin **bissextīlis**).

The Day.

The civil day began at midnight and was marked out into 24 hours. The natural day began at sunrise and ended at sunset. It was marked out into twelve hours (**hōrae**) of equal length, counted from sunrise. As in midwinter at Rome the day is only 9 hours long, while at midsummer it is rather more than 15, the length of **horae** depended upon the time of year, and varied from three-quarters of an hour to an hour and a quarter. The seventh hour (**hora septĭma**) always began at midday.

The night was divided for military purposes into four watches (**vĭgĭlĭa prīma**, etc.) of equal length, beginning at sunset.

The following table gives the days of the months as they were named after B.C. 45. Before that date, March, May, July, October were the same as in the table; in all the others our 14th would be a. d. XVII Kal., and so on, and Prid. Kal. would fall on our 29th.

Kalendae, Nonae, Idus, are feminine; the names of the months *adjectives* agreeing with these; the date (e. g. *on the Calends*, etc.) is in the ablative case (**Kalendis, Nonis, Idibus**); a. d. **IV Non. Jan.** is for **ante diem quartum Nonas Januarias.**

APPENDIX IV.

1. ROMAN MONEY.

The unit of reckoning was the nummus sestertius, *coin of two and a half* (see p. 112(5)) asses, which number it originally contained. It was also called nummus and sestertius alone.

Sesterces	Sums of 1,000,000 and upwards expressed by Numeral Adverbs with { centum / centena } millia sestertium.	Sums below 1,000,000 expressed by Cardinal Adjectives with { millia sestertium / sestertiā } milliā in compounds with smaller numbers.	Sums below 2,000 expressed by Cardinal Adjectives with { sestertii / nummi }
2			duo sestertii nummi
1,999			millě nongenti nonaginta novem.
2,000		duo millia sestertium	
999,999		nongenta nonaginta novem millia sestertiā	(et) nongenti nonaginta novem.
1,000,000	deciens centena sestertium		
1,800,000	deciens	octingenta	
2,235,417	viciens (alone)	ducenta.triginta.quin-que	quadringenti centum decem et septem.

The following is approximate value in English money of amounts between 217 to 20 B.C.:— Sestertius=2d.; mille sestertium=£8 10s.; deciens sestertium=£8,500.

Obs. 13. The sign IIS or HS was used to denote sestertius, sestertium, and sestertia. A line drawn over the accompanying numeral denotes thousands.

Obs. 14. The distributive adjectives are used without any special meaning.

2. INTEREST ON MONEY.

After 451 B. C. the legal rate of interest was—

Unciarium fenus, *interest of one-twelfth* (see p. 112(3))$=8\frac{1}{3}$ per cent. As the year contained 10 months, this was probably equivalent to 10 per cent. per annum.

After 81 B.C. the legal rate of interest was—

Centensima pars sortis, *one-hundredth part of the whole* $=12$ per cent. Interest being at this time reckoned monthly, this was equivalent to 12 per cent. per annum.

This rate was taken as the unit, and lower rates represented by fractions, e. g. :—

Usurae unciae$=\frac{1}{12}$ of **centensimae usurae**$=1$ per cent. per annum.

Higher rates by distributives, e. g. :—

Binae centensimae$=$*twice one-hundredth*$=24$ per cent. per annum.

Or by combinations of distributives and fractions, e. g. :—

Usurae centensimae et unciae$=13$ per cent. per annum.

Obs. 13. For the other fractions of **centensima** see p. 110. They are in the plural number, having **usūrae** in apposition.
